# VARONIS
DATADVANTAGE
OFFICE 365

Protect your Office 365 data

DatAdvantage for Office 365 gives you the visibility and security you need to keep your data safe in the cloud.

Identify and investigate security threats, unusual activity, and user behavior.

Get complete visibility on permissions structure, access events, and external sharing.

Discover sensitive content, see who's accessing it, and lock down overexposed data.

Varonis gives us reporting on when people access files, who accessed them and where, which makes moving some of our data to Office 365 a lot easier for us on all levels of the organization.

– Scott Stefan, Executive Director of Information Services, University of Maryland School of Medicine

VARONIS

Secure your enterprise data in the cloud

- Audit file activity and user behavior on SharePoint Online and OneDrive

- Discover sensitive content and manage access to critical data

- Automate reports and meet compliance regulations

Visibility & Auditing

- Get complete visibility into the permissions structure of your data in Office 365 for SharePoint Online, Exchange Online, and OneDrive

- Discover overexposed data, users, and groups

- Monitor and analyze file activity and user behavior on SharePoint Online and OneDrive

- Automate reports and review access to critical data

Data Security in the Cloud

- Discover sensitive data in Office 365 including PII, HIPAA, and critical documents

- Identify and remediate risk by highlighting where sensitive data is vulnerable

- Monitor folders in SharePoint Online that were shared with external users

- Detect ransomware, insider threats, and more on SharePoint Online and OneDrive with DatAlert

VARONIS

Varonis is a powerful software suite that protects your file and email servers from cyber-attacks and insider threats. We analyze the behavior of the people and machines that access your data, alert on misbehavior, and enforce a least privilege model.

We help thousands of customers prevent data breaches.
