

VARONIS EDGE

Extend Your Data Security to the Edge

Spot signs of attack at the perimeter with telemetry from VPN, DNS, and Web Proxies.

Analyze activity on perimeter devices including DNS and VPN.

Apply geolocation and threat intelligence to your security telemetry.

Detect perimeter attacks like malware, APT intrusion, and exfiltration.

It's like having an extra staff member that never sleeps always watching over our data.

– Jay Attiya, Director of IT, Toms River Regional Schools

Detect perimeter attacks including DNS attacks, domain hijacking - even stolen credentials on a VPN.

- Detect primary intrusion vectors of malware: email, web, and brute force attacks
- Correlate events and alerts so you can see the full picture and investigate security violations.
- Stop Trojan code from leveraging DNS for botnet campaigns, financial data theft campaigns or targeted attacks

Get more telemetry and context from the core to the perimeter

- Track potential data leaks and attacks at the edges
- Apply perimeter context to internal alerts
- Apply internal context to perimeter alerts
- Monitor perimeter attacks and put them in context with activity and alerts in your core data stores

Detect Attacks on the Edges of the Cyber Kill Chain

- DNS Tunneling
- Access from a suspicious or unexpected geolocation
- Account Hijacking
- Access from a suspicious IP
- Access to known C&C servers
-many more

Live Demo

Set up Varonis in your own environment.

ABOUT VARONIS

Varonis offers a powerful software suite that protects your file, email servers and cloud applications from cyber-attacks and insider threats. We analyze the behavior of the people and machines that access your data, alert on misbehavior, and enforce a least privilege model.

We help thousands of customers prevent data breaches.
